HORIZON FOUND

The *Engine*

Your brand. Your voice. Just faster.

Start here guide · install, set up, and your first week

Prototype 0.2 · October 2026

BEFORE YOU START

Two minutes to install. *Forty* to set up.

The Engine is an assistant that learns your voice and your look, then helps you post on Instagram every week. It suggests. You decide. It never posts anything.

YOU'LL NEED

- → A paid Claude plan (about $20 a month). The free plan runs out mid-conversation.
- → The Claude desktop app, installed and signed in. Not the website: the screens in this guide are from the app, and the reel tool only works there.
- → 3 to 5 captions you wrote yourself and liked.
- → Your Instagram open on your phone.
- → One quiet sitting of about 40 minutes.

YOU DON'T NEED

- × CapCut. Only the reel tool uses it, and that comes later.
- × Canva Pro. Nice to have for templates, never required.
- × Any technical setup. The first three tools are just conversation.

Nothing to download. The install is a link you paste into Claude, and updates happen on their own.

INSTALL

Paste one link. *Done forever.*

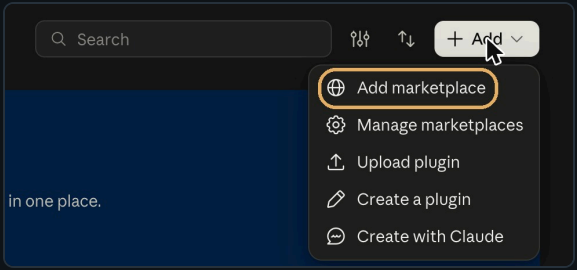

Do all of this in the **Claude desktop app**, not the website. Download it at claude.ai/download, sign in, then follow the pictures. Six clicks, once.

1

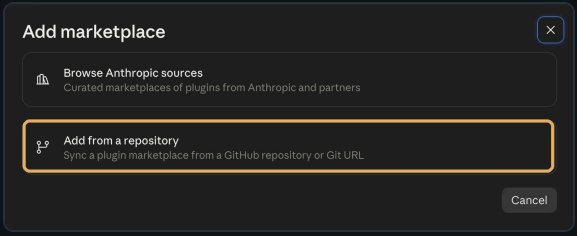

Open the Claude desktop app. Click your name in the bottom corner → Settings. In the left list, under Customize, click Plugins.

2

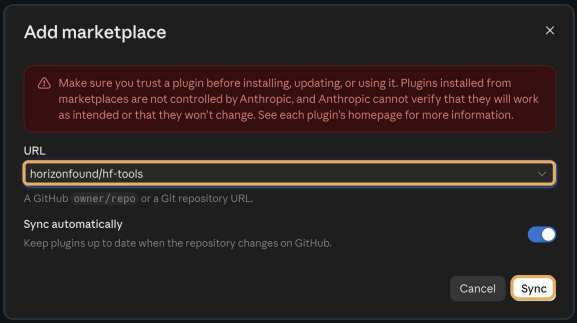

Top right, click + Add, then Add marketplace.

3

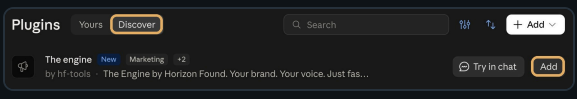

Choose Add from a repository.

4

In the URL box type `horizonfound/hf-tools` exactly like that. Leave "Sync automatically" on. Click Sync.

5

Click the Discover tab. The Engine is there. Click Add. That's the whole install.

INSTALL, PART TWO

Make it a *Project.*

6 Make a Project for your business

In the app's left sidebar, `Projects` → `New project`, named after your business. A Project is a folder that remembers. When the Engine hands you your Brand File, open the Project page, find the `Files` panel on the right, click `+`, and upload it there. Every chat inside the Project then reads it.

7 Start a chat inside the Project and type

`start here`

That begins the 40-minute conversation. Next page tells you what to expect.

UPDATES

Automatic. When we improve the Engine, your copy updates itself. We'll email you what changed. Nothing to install, ever again.

IF STEP 4 WON'T TAKE THE LINK

Rare, but: there's a zip file in Module 0 of the course. Use **+ Add → Upload plugin** and pick it. You'll need to repeat that for each update, so try the link first.

START HERE

The conversation that *teaches it you.*

Everything the Engine does later depends on this one sitting. Here's what it asks and why.

Your business

Who you shoot, where your clients come from, what you charge, what you're trying to book. Plain answers. No essay.

Your voice

It won't ask you to describe it. It asks for 3 to 5 real captions, your best client reviews, and a two-minute voice memo of you talking about a session you loved. Record it on your phone, drop the file in. It writes from those.

Your look

A quick "this or that" round, like an eye exam. Moods, fonts, colors pulled from your own photos, layouts. Answer with your gut. It lands on three directions and you pick one.

The voice check

It writes three test pieces: a caption, a reel hook, a story. Read them out loud. Anything that isn't you, say so. "I'd never say cherish." "Too long." "No exclamation points." Every fix gets saved.

IF YOU NEED TO STOP

Type `pause, we'll pick this up` and it gives you a short summary to paste back in later.

BE BLUNT

Polite feedback makes it generic. Tell it exactly what you'd never say.

AFTER THE BRAND FILE

Four tools, in the *order* you use them.

Start here

say: start here

The 40-minute conversation above. Once. It writes your Brand File.

Fix my grid

say: fix my grid

Screenshot the top of your Instagram grid, two or three screens, and drop them in. It tells you what's fighting what and gives you a few moves, like "swap post 3 and post 7." Instagram lets you drag posts now: long-press one on your own profile.

Plan my week

say: plan my week

Tell it what you shot and what's coming up. It gives you three feed posts and two or three stories with captions written, planned to sit well together on your grid. Read every caption like you're the one hitting post. Change what you'd change.

Make a reel

say: set up the reel tool · check my setup · make a reel from Saturday's session

Point it at a folder of clips. It cuts the dead air, plans the beats, and builds the reel in CapCut in your fonts and colors, every layer still editable. Needs the Claude desktop app, CapCut desktop, and a one-time install it walks you through.

YOUR FIRST WEEK

Monday plan. Shoot. *Post.*

Mon — **Plan**

"Plan my week." Ten minutes. Approve it or change it.

After shoot — **Drop it in**

After a session, point it at the gallery or the clips. It sorts them and suggests what's worth posting.

Same day — **Build and post**

Caption in your voice, reel in CapCut. You tweak, you post. New reels go out as trial reels first.

UPDATES

Automatic. Your Brand File and Post Bank live in your Project, not in the plugin, so nothing you've built is ever touched by an update.

STUCK?

Type `check my setup` to see what's missing. Or email support@horizonfound.com with a screenshot, and say Mac or PC.

It gets faster every week, because it keeps learning what you fix.
